Summary

I am a Computer Science student with strong interest in Artificial Intelligence and Machine Learning, software and systems programming, Algorithms, competitive Programming. actively participating in hackathons and technical competitions and contests in codeforces.

Education

B.Tech in Computer Science and Engineering 2024 – 2028
IIIT Hyderabad (CGPA:7.22)

Intermediate Education 2022 – 2024
Aditya Junior College, Kakinada (CBSE : 94.6 percent) (JEE Mains -AIR 941, JEE ADV - AIR 1795)

Skills

Programming: C, C++, Python, SQL, HTML, CSS, JavaScript, React, Express, MongoDB, Node
Core: Data Structures, Algorithms, DBMS, OS, Computer Networks, Software systems, Machine Learning
Tools: Git, GitHub, Android Studio, VS Code, CVAT, Label-Studio

Projects

C-shell

Built a C-shell with command parsing, pipe handling, I/O redirection, and background process management. Implemented job control and signal handling.

C-shark packet sniffer

Built a command-line packet sniffer in C/Python that captures and decodes live network traffic across all major protocol layers (Ethernet, IP, TCP/UDP, HTTP/DNS). Features include protocol filtering, session tracking with memory management, and forensic-level packet inspection with hex dumps and header analysis.

Distributed Collaborative Document System (C, TCP Sockets, POSIX)

Built a distributed collaborative document system in C using TCP sockets, featuring a centralized Name Server and multiple Storage Servers supporting concurrent multi-user editing with sentence-level locking, access control, and undo. Implemented client-server communication with metadata caching, persistence, and real-time reads, writes, streaming, and remote command execution.

S.H.A.M.: Reliable UDP Transport Protocol (C, Socket Programming)

Built a reliable TCP-like protocol over UDP from scratch in C, implementing custom headers, sliding window, cumulative ACKs, retransmissions, and flow/congestion control with three/four-way handshakes. Supported file transfer and real-time chat with loss simulation, timeout recovery, and microsecond-precision event logging.

Felicity Event Management System(MERN Stack)

A website for Managing college fest events, registrations, and participants. Implemented role-based access control with JWT authentication, dynamic event creation workflows, QR-based ticket generation, and real-time features like team chat and discussion forums. Deployed the application with a React frontend on Vercel and a Node.js backend on Railway, integrated with MongoDB Atlas.

Experience & Activities

Machine Learning Research Intern

May 29th 2025 – July 1st 2025

Indian Institute of Technology Bombay (IIT Bombay)

Mumbai, India

- Worked under Professor Ganesh Ramakrishnan and contributed in writing a hands-on book on Machine Learning and deep learning. Annotated large video datasets through the extraction of frames using OpenCV, Python and labeling them using CVAT to train computer vision models.
- You can view the LOR here: [click here](#)

Software Developer Intern (Hustlr)

January 2026 – April 2026

Built a selective freelance marketplace using Next.js 15, React 19, and Supabase (Auth + PostgreSQL) connecting vetted college students with client projects. Automated candidate screening by integrating Gemini 2.5 Flash LLM to evaluate applicants based on GitHub activity and hackathon history, with JWT-secured role-based access and automated email workflows via Resend.
